EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Paul Greeley (Reg No. 31,019) on November 30, 2009.

The application has been amended as follows:

In the Claims:

A) Claim 1, line 18, should be amended to add "wherein said choosing step chooses said candidate if a difference between said current block and said candidate is less than a first quality and rate measure; and

wherein if said difference is greater than said first quality and rate measure, said finding step further searches a second memory, which stores reference data without regard for said decoding process, for at least one other candidate that is a match with said current block, and wherein said choosing step chooses said other candidate if a total difference between said current block and said candidate found in said primary memory by more than a second quality and rate measure" in the claim.

B) Claim 8, line 15, should be amended to add “wherein said motion vector selector chooses said candidate if a difference between said input block and said candidate is less than a first quality and rate measure, and

wherein if said difference is greater than said first quality and rate measure, said motion estimator searches a second memory, which stores reference data without regard for said decoding process, for a second match with said current block, and wherein said motion vector selector chooses said other candidate if a total difference between said input block and said other candidate is less than a total difference between the input block and the candidate found in said primary memory by more than a second quality and rate measure” in the claim.

C) Claims 11-14 should be cancelled.

The following is an examiner's statement of reasons of allowance: The present invention of involves an encoding and decoding process for video frames. The closest prior art, Schlockermann et al teaches “generating a predicatively encoded data stream, (a) providing a primary memory model, (b) finding at least one candidate that is a match. The prior art does not teach wherein if said difference is greater than said first quality and rate measure, said motion estimator searches a second memory, which stores reference data without regard for said decoding process, for a second match with said current block, and wherein said motion vector selector chooses said other candidate if a total difference between said input block and said other candidate is less

than a total difference between the input block and the candidate found in said primary memory by more than a second quality and rate measure.
